Art Unit: 1731

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 25-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over NAJI et al (6,030,447) in view of the ADMITTED PRIOR ART (specification, paragraph [0031] and Table 1) with or without WINGERSON (6,419,788).

NAJI et al teaches a composite building material comprising cellulose fibers which reinforce the product (column 2, lines 7-19, and an aggregate (siliceous material. see abstract), a density modifier (column 2, line 21) and one or more additives (column 2, lines 20-31). The ADMITTED PRIOR ART teaches that conventional pulping and washing at conventional temperatures (55-60 °C) results in cellulose fibers, e.g. the cellulose fibers of NAJI et al, having a COD content of 5 kg/ton. The claimed "less than about 5 kg/ton" (emphasis added) would read on 5 kg/ton \pm 10%, e.g. "less than 4.5 to 5.5 kg/ton". The "5.5 kg/ton", which reads on the claimed "less than 4.5 to 5.5 kg/ton" does not define over the washing of the ADMITTED PRIOR ART or the product of NAJI et al. If necessary, WINGERSON teaches producing substantially pure cellulose (column 3, line 56) by first treating cellulosic material with steam and then washing with alkaline hot wash water containing dissolved oxygen at elevated temperatures, e.g. 180 to 240 °C, to remove decompose, mobilize and remove lignin, extractives and residual hemicellulose, e.g. the COD's. It would have been obvious to the artisan to further remove the COD's of NAJI et al and/or the ADMITTED PRIOR ART using the elevated washing temperatures of WINGERSON. Such a washing would lower the COD's of NAJI et al

Art Unit: 1731

to less than 5 kg/ton. It is noted that the instant process can also use oxidized wash liquor, e.g. the same wash water used by WINGERSON, see instant specification, page 3, [0009].

The disclosure is objected to because of the following informalities: Page 7, the Serial Numbers and status are missing from the cited Applications.

Appropriate correction is required.

SVEDMAN cited of interest to teach washing pulp at temperatures of 70 to 75 °C.

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 24, 2005 has been entered.

Applicant's arguments are moot due to the new art rejections.
